**DETAILED ACTION**

***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CAR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-3 and 10-15, drawn to method for determining an amino acid sequence motif.

Group II, claim(s) 4,6 and 8, drawn to enzyme substrate, pharmaceutical composition and a treatment method.

Group III, claim(s) 5,7,9 and 16, drawn to enzyme inhibitor, pharmaceutical composition and a method of treatment.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I does not share a special technical feature with Groups II and III because the claimed process of group I requires a special technical features for determining an amino acid sequence and does not

Art Unit: 1639

share a technical features for the compounds, composition and the method of treatment of groups II and III. Accordingly, the claims are not so linked by a special technical feature within the meaning of PCT rule 13.2, so as to form a single inventive concept.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Peptide, peptidomimetics or unnatural amino acid sequences (i.e., a species of a peptide. Peptide is a genus not a species. This is only termed species in the context of the different recited genus).

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Art Unit: 1639

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CAR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Claims 1-16

The following claim(s) are generic: 1

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: a peptide amino acid sequence lacks the special technical feature of a peptidomimetic which is a structurally modified peptide. Likewise, the unnatural amino acids lack the special technical features of a natural amino acid sequence or its mimics.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CAR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CAR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1639

remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CAR 1.48(b) and by the fee required under 37 CAR 1.17(I).
